

'Pokemon Go', one of the most prestigious apps in summer of 2016. Who wouldn't want to be a master? But a con the app has is that it requires personal information to create your pokemon. Documents B, D, and E support the cons the app has.

To begin with, use of personal information is one of the cons 'Pokemon Go' has. According to Document B, it states "Pokemon Go uses your phone's location, your IP address, and the webpage you most recently visited before playing, all connected with your real name and account information, according to the game's privacy policy." 'Pokemon Go' doesn't explain their users detailed before downloading the app. According to Document B, it states "It uses a Google map and your real-world GPS location to direct you to Pokemon you can catch, and that information can be misused." The app can find your real-world GPS and that information can be misused. 'Pokemon Go' has some risks such as using your personal information without the player knowing how it's going to be used.

Secondly, bad consequences can occur when 'Pokemon Go' doesn't explain the policy with detail. According to Document D it states "News Reports say that users have tripped, fallen into a lake, crashed a car, and sustained other injuries while playing. Others say that the game is bringing people together and creating a sense of community." Some people have had severe injuries for being concentrated in catching a pokemon. According to Document E it states "Some psychological cons are that even when players are outside, they are distracted by being on their phones, and players are continuously in a heightened "stressed" state, making players less social or willing to talk with others, which can increase the difficulty of separating reality and fantasy." Many people get distracted by playing 'Pokemon Go'. Many players get distracted easily and probably that's the reason why most people are getting injured.

Lastly, looking for pokemons in abandoned places. According to Document D it states, "Opponents say that the game is encouraging people to play in inappropriate places. In their quest to capture creatures, players are failing to respect their surroundings." Most pokemons are found in places where people usually refer to but some pokemons are found in abandoned places which is not good. According to Document D it also states "Playing games such as Pokemon go on these hallowed grounds would not be deemed appropriate." Pokemon go is one of the most downloaded games to guide people to capture pokemons to abandoned hallowed grounds.

In conclusion, Pokemon go is not a bad game. Pokemon go has its cons but overall people seem to love it. But in my opinion I don't think Pokemon go should use personal information. Indeed the app should be detailed about asking people for personal information not just getting it without any permission. Also the app 'Pokemon Go' should not allow its users to go into hollow or abandoned grounds because most users are teenagers and they can be in danger. Hopefully the app of 'Pokemon Go' can master the app the same way the users use it.
